

Fillings

If dental decay has already occurred in your teeth then we are able to offer a variety of care options to attempt to remedy this.

Traditionally decayed teeth have been filled. Nowadays we usually prefer to use tooth coloured fillings, in many situations these are not only more natural looking but a healthier option for the teeth as they are bonded to the tooth. This not only looks better but can also help to strengthen the teeth. We use air abraders to enhance this technique. We always encourage our patients to become involved in this decision making process.

In some situations, instead of using traditional filling techniques, it is possible to be less destructive to the teeth. We always try and retain as much of the natural tooth tissue as we can for you.
